

2 New Profile Measuring Systems from ZUMBACH Electronics, Switzerland successfully commissioned at Wuppermann Metalltechnik GmbH and Wuppermann Austria GmbH.

As a pioneer of on-line measurement, Zumbach Electronics manufactures a comprehensive range of non-contact, on-line measuring and control instruments. Our technology is in use world-wide for such dimensional parameters as diameter, thickness, eccentricity, out-of-round and for physical or electrical parameters like expansion, capacitance, dielectric strength, and more. One or more parameters of a production line can be monitored simultaneously.

In June, resp. July 2008 further two new PROFILEMASTER[®] SPS systems have successfully been commissioned at Wuppermann Metalltechnik GmbH in Altmünster and Wuppermann Austria GmbH in Judenburg. The systems have especially been designed for use in harsh environments in the steel and metal industry.

The measuring units are equipped with 4 CCD camera/laser modules and measure the complete tube profile of different shapes, such as square, rectangular, round or special forms. All the products are measured on-line, directly in the manufacturing process (cold measurement). The systems are an important step to guarantee a high quality standard for manufactured profiles.

According to the customer statement, the PROFILEMASTER[®] systems mean a major relief for the line operator.

The customer envisions acquiring a third system for a new production line which will be commissioned in 2009.

PROFILEMASTER[®] systems are available in multiple designs, depending on the requirements of the customer and product. The systems are best suited for the continuous measurement monitoring of dimensions or even the complete cross-section of profiles made of metal, plastics or rubber.
