Diameter Scanner and Flaw Detector in One Unit

ZUMBAHC, pioneer of on-line measurement and its triple-axis ODAC TRIO laser diameter gauges belong to the market leaders of super fast diameter measuring devices. 3 synchronized measurement axis in 1 single plane provide comprehensive measurement coverage, peak-precision diameter and ovality measurement as well as precise and super-fast flaw detection capabilities. Such combinations will help to reduce system costs due to the combination of diameter measurement and flaw detection into one single measuring device. Thanks to the compact design, the ODAC® 33TRIO measuring heads can be used in virtually every manufacturing process in the wire and cable industry, the plastics and rubber industry as well as the steel and metal industry. Known for precision, quality and ease of use the laser measuring heads from ZUMBAHC are among the best of their class. The technological basis considered for these measuring heads is always of the latest cutting edge technology, with laser diodes as light sources combined with intelligent and powerful measured-value processors which facilitate a simple and flexible integration. Our long-standing experience as a pioneer of in-line measuring technology, combined with high production figures result in a product with an excellent price-performance ratio.

Amongst the outstanding features are features such as single scan calibration (CSS), single scan monitoring and high data rate output of up to 200* data packages per second. The measuring heads can be used with all line speeds. Vibrations during production have no noticeable influence on measurements.

Adaptive signal processing in the measuring units increase accuracy

All the measuring heads of the ODAC® series have adaptive signal processing (patent DE3111356), which makes subsequent regular re-calibrations superfluous. Only in instances of component exchange or compliance to calibration regulations ISO 9001 etc. would re-calibration be required. All the relevant parameters for accuracy are continuously monitored by the measuring system and automatically compensated. This is valid in particular also for possible long-term changes of the behaviour of the scanner motor or the measuring electronics.

* Depending on the measuring head model, the number of transmitted measured values as well as the baud rate of the interface.

Main Advantages

- 9000 measurements per second (FF version)
- 3 synchronized measurement axes on 1 single plane
- Single scan monitoring – up to 9000 scans/second
- Reliable detection of the ovality
- Detects any deviation from roundness of oval and out-of-round with polygonal shape (multi-lobe)
- Yields highly accurate mean value, regardless of the orientation of the product ovality
- Computes accurate values of circumference and cross section (important for fittings of tubes and hoses)
- Increased measurement accuracy and reliability
- High dirt and dust tolerance
System Overviews

**ODAC® 33TRIO-EN-RS (serial interface)**

The built-in processor allows the acquisition and monitoring of the measured values, as well as statistic functions, parameter selection and many other functions. The RS version communicates via the integrated RS interface with a higher level system, like USYS from Zumbach, Host computer (or PLC). The Zumbach protocols ODAC or Host are selectable according to choice. The service interface (Ethernet TCP/IP) is used for configuring the measuring system.

**ODAC® 33TRIO-EN-DP (Profibus DP), -EN-PN (Profinet IO) or -EN-EI (EtherNet/IP)**

The built-in processor allows the acquisition and monitoring of the measured values, as well as statistic functions, parameter selection and many other functions. These versions communicate via the integrated Profibus DP, Profinet IO or EtherNet/IP interface with a higher level system. These interfaces are designed for high speed data transfer at the sensor actuator level. At this level, controllers such as programmable logic controllers (or PLC’s) exchange data via a fast serial (Profibus DP) or Ethernet (Profinet IO) connection with their distributed peripherals such as drivers, valves or intelligent slaves like ODAC measuring heads from Zumbach.

**ODAC® 33TRIO-EN-EN (Ethernet)**

The built-in processor allows the acquisition and monitoring of the measured values, as well as statistic functions, parameter selection and many other functions. The EN version communicates via the integrated EN interface with a higher level system. The measured values and parameters are integrated and transferred using a selectable Zumbach protocol (ODAC or Host protocol) in standardized packages of the TCP/IP. TCP/IP allows the data transfer through existing networks such as LANS and others.

**ODAC® 33TRIO-J with the corresponding external ZUMBACH processors**

- USYS 20
- USYS 200

<tr>
<td>Floor stand ST2-ODAC 34XY/33TRIO 45°</td>
<td>ST02.089.72260</td>
</tr>
</tbody>
</table>

Vertically adjustable.

- Line height (H): 900…1200 mm (35.43...47.24 in.)

Swivel floor stand ST2-ODAC 33TRIO

- Vertically adjustable.
- Line height (H): 880…1180 mm (34.64...46.46 in.)
- Swivel angle: 90° (upward)

Mountable support for ST2

- Lateral support, including rotary holder (USY.0002.910) for table top version of the USYS 20 processor.

Guide VFG30-ODAC33

Vertically adjustable, with ceramic rollers (V shape) for measured object diameter up to 30 mm (1.18 in.).

Guide VRG30-ODAC33

Vertically adjustable, with rotating steel rollers (V shape) for measured object diameter up to 33 mm (1.18 in.).

Set of calibration standards

Delivered in a protection box, comprising:
- Calibration standard holder
- Calibration standard ø 2 and 28 mm
- Certificate
- Other calibration standards on request.

Local display LOC 01

Is mounted directly on the measuring head. Requires connection cable # ODAC.9167.00004 between LOC 01 and the measuring head.

Not for ODAC J versions.

Signal cable L2 Bus 1DR22 x 02R

For the connection between the Profibus DP interface and the customer’s data acquisition system. Only for ODAC DP versions.

Analogue interface AI 4-ODAC

Interface with 4 analogue and 5 digital outputs. Direct connection of the digital input (proximity switch). Not for ODAC J versions.

Connector

Counter connector for digital input "I/F".

Connection of a proximity switch. It is not required if the analogue interface AI 4-ODAC is used already.

Not for ODAC J versions.

Proximity switch

The proximity switch is used for the length detection.

Main data:
- Standard: EN 60947-5-6 (NAMUR, NC)
- Switching distance max. 2 mm (.08 in.), flush mounting
- Ambient temperature: -25...100° C (-13...212° F)
- Protection: IP 67, Connection: PVC cable 2 m (6.5 ft.)

**Dimensions**

- Dimensions in mm (inch)

#### Indicator of contamin. windows

- Flashing LED on the measuring head

#### LED Host interface

- Indicates link and traffic

#### LED Host interface

- Indicates link and traffic

#### LED Host interface

- Indicates link and traffic

#### Energy supply

- Power supply: 100...240 VAC
- Operating range: typically 85...265 VAC
- Mains frequency: 47...63 Hz
- Power output: 25 VA

#### Operation conditions / Miscellaneous

- Ambient temperature: Operating: 0...45°C (32...113°F), Transport / Storage: -20...50°C (-4...122°F)
- Max. atmospheric humidity: 95% (non-condensing)
- Altitude: 0...3000 m (0...9843 ft.) over sea level
- Type of protection: Case IP 65, connection plate IP 40
- Weight: 5.5 kg (12 lbs)

1) M stands for measuring field height. In practice, the largest object diameter corresponds to Measuring Field Height minus instability of position.

2) System resolution is the smallest practical value on the last digit of the display.

3) Measured in the measuring plane, incl. lateral Jitter of the scans.

4) Maximum power of the laser can be read on the warning label.

5) The connection between ODAC 33TRIO-EN-RS and the higher level system is to be provided by the customer (via serial interface).

6) For the ODAC 33TRIO-EN-DP versions, the connection to a higher level system is made with the signal cable # A13 252 0150.

7) The connection from the measuring head to the customer’s Ethernet port, and error and explanatory labels prescribed by CDRH or IEC/EN 60825-1:2014.

#### Ordering Information

When ordering, please specify the following:

1. Measuring head models: ODAC 33TRIO-EN-RS/-DP/-EN/-PN/-EI, ODAC 33TRIO-J

2. Connection cable

   2a The connection between ODAC 33TRIO-EN-RS and the higher level system is to be provided by the customer (via serial interface).

   2b For the ODAC 33TRIO-EN-DP versions, the connection to a higher level system is made with the signal cable # A13 252 0150.

   2c For the ODAC 33TRIO-EN/-PN/-EI versions, the connection from the measuring head to the customer’s Ethernet port, must be provided by the customer.

2d Length of the connection cable between ODAC 33TRIO-J and the processor. Available lengths: 1, 2, 5, 10, 15, 20, 25 and 30 m (3.3, 6.6, 16.4, 32.8, 49.2, 65.6, 82 and 98.5 ft.); longer cables are on request.

3. Processor model (Data acquisition system), only for ODAC 33TRIO-J: USYS 20, USYS 200, USYS IPC 1e, USYS IPC 2e, CI 1J/EN-RS, CI 1J/EN-DP, CI 1J/EN-EN, CI 1J/EN-PN, CI 1J/EN-EI. Please ask for corresponding data sheets.
